OmniTrust Lite Touch Nitrile Gloves

Who are we? – Omni International LLC is a very progressive supplier of gloves in markets including Medical/Dental (all healthcare), food service, retail/consumer, industrial/janitorial and clean room.

What is a nitrile glove? Nitrile is an excellent alternative to natural rubber latex! Maybe one of its strongest benefits is its resistance to chemicals. Nitrile Powder Free Examination Gloves are manufactured using nitrile synthetic material and are ideal for those who are allergic to natural rubber latex. They provide easy donning without the use of lubricating powder that may cause contact dermatitis on skin. In addition, nitrile film is more puncture resistant than latex or vinyl and offers excellent tactile sensitivity.

What is OmniTrust™ LT (Lite Touch) Powder Free Nitrile - #202 Series ? - OmniTrust™ Lite Touch (LT) 100% Nitrile Powder Free exam gloves contain no natural rubber latex. This is one of the lightest, yet durable medical nitrile gloves in the market place today! Our Lite Touch nitrile material is “Thermal Sensitive”. Essentially that means as the glove warms to body temperature, while being worn, it molds to the shape of your hand making it one of the most comfortable gloves you will ever wear! Featuring the strength, static and chemical resistance of Nitrile, these gloves have excellent donning characteristics and textured fingers for excellent grip control. Flat packed for optimum dispensing. Available in sizes Small through Extra Large.

Features and Benefits

Thermal Sensitive - Professionals love the OmniTrust #202 Lite Touch Nitrile Glove because of its form-fit to the hand. As mentioned above, the “thermal sensitive” nature of our Lite Touch Glove allows it to gradually mold to your hand, over the course of a couple minutes. Different from other gloves that can fight the hand, this unique feature allows the hand to relax more while the glove is in use.

Smooth Yet Textured – Perfect for many markets especially:

- **Dental** - The smooth surface affords maximum patient comfort while the textured finger tips promote precision instrument manipulation.
- **Medical/Laboratory** – An excellent glove for instrument utilization as well as grasping syringes, needles and glassware.
- **Long Term Care** – The smooth surface allows easy comfortable patient movement while the textured finger tips allow enough texture to grip the skin/clothing for maneuvering the ambulatory patient.

LITE – A new generation of glove, this thin film nitrile is very affordable and encourages the facility to consider nitrile over potentially allergic reactive latex.

Sales Word Highlights - Light – Thermally Sensitive to form fit after donning - Durable – Strong – Smooth Surface – Textured Fingers – Latex Free – Powder Free - 150 per box – Flat Packed for Optimum Dispensing
